

ecoegg detox tablets

Directions for use

It's a 'detox' for your washing machine!

All washing machines need cleaning out every now and again, especially if you have been using powder and liquids for some time. They tend to leave deposits in the pipes and crevices which can lead to unpleasant smells. The build ups are not good for your machine either. Over time your washing machine may become less efficient or it could even stop working altogether.

The Ecoegg detox tablets take care of this by giving your washing machine a really good clean – even in the areas you can't see. You just need a single tablet for a complete detox. We recommend detoxing your machine every six months to keep it in tip-top condition. 6 tablets are supplied in this pack, enough for 3 years' worth of detoxing!

Instructions for use

Simply unwrap the detox tablet and place it directly into the drum of your washing machine and put the machine on the hottest, longest setting available. Apart from the detox tablet, leave the drum empty - do not put any clothes in during this detox cycle. Do not put the ecoegg in during this cycle. At the end of this cycle, your machine will be left fresh and clean. Remember to detox your machine at least once every six months to keep it in tip-top condition!

①

Remove the detox tablet from the wrapper.

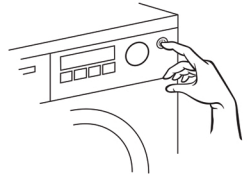

②

Put the detox tablet directly into the drum of your washing machine.

③

Except for the detox tablet, leave the drum completely empty and put the machine on the hottest cycle it has.

Remember, the ecoegg itself should not be used above 60 degrees Celsius

It is only for the detox cycle that you should use a hotter wash
